

Introducing the next generation of wrap film - the 3M™ Wrap Film Series 2080.

The film features a multi-layer cast adhesive backed film for solid colour vehicle detailing, decoration and full wraps. It also utilizes 3M™ Controltac™ and 3M™ Comply™ technology for increased application time savings, repositionability and slide ability of the film.

3M have asked installers what they were looking for in a wrap film, the result - Wrap Film Series 2080.

- An industry first Protective Film Layer on gloss colours to reduce surface impressions and scratches
- Unique, conformable film layers for a better fit around curves and in channels
- Improved Warranty (up to 8 years)

**Please note this is a non-returnable material and please also note that the gloss colours can not be slit due to the Protective Film Layer.*
