

Versatile, Non-PVC Digital Film with Air Egress

3M™ Envision™ 48C is an 80 micron, matt white film with a permanent solvent adhesive.

The product offers great versatility for indoor and outdoor signage and fleet graphics and is suitable for printing with latex, solvent and UV inks.

The inclusion of Controltac™ minimizes the initial contact area of the adhesive which allows for greater levels of repositionability. This allows easier installation of large format graphics in a wide temperature range.

The addition of Comply™ adhesive helps provide bubble free installations.
