

3M™ Series IJ180mC with micro Comply™ adhesive has non-visible air release channels for fast and easy, bubble-free graphic installations.

The film consists of a pressure activated adhesive for easy sliding, tacking, snap-up and repositioning.

IJ180mC conforms to flat surfaces, with and without rivets, simple curves, compound curves and corrugations.

The product is fantastic for full wraps thanks to its 3D conformability and 130% film stretch. It's also great for indoor and outdoor graphics and signs, including point-of purchase and displays.

The transparent film colour can be used for two-way emblems for windows, except buses or other vehicles.
