

# WW 200

White matt semi rigid calendered PVC film 150 µm removable and repositionable for indoor application only. Overlaminates not recommended

A winning option for anyone who has ever wanted to decorate an indoor wall - and keep the chance to change their mind. WW 200 uses a special ultra-removable adhesive. You can apply the film, reposition it, and then remove it ready to re-apply it at a later date (re-using the liner for storage) - all without leaving an adhesive residue. This film is an excellent choice for anyone (domestic or retail/corporate) who wants to transform plain walls or to create a large temporary display. The material can transform a non-porous flat wall into a work of art or prime advertising space in minutes.

## KEY FEATURES
