Premium Digital Printing PU

ORAJET® 3981RA+
ProSlide

ORAJET® 3981RA+ ProSlide Premium Digital Printing PU - the environmentally friendly alternative when it comes to car wrapping

ORAFOL's polyurethane based car wrapping film just got even better! With the ProSlide technology installation has never been easier. Its repositioning features are unbeatable. On top of this the material can be stretched more than conventional wrapping films, and will not lift. Covering compound curves is no problem, and with the classic RapidAir® technology, the risk of bubbles forming under the material during the process is avoided.

And, it get's even better: Being 100% free from PVC as well as plasticisers, this polyurethane film adds to ORAFOL's already large range of "green" graphics films.

The material is developed for inkjet printing, and with its glossy surface prints will stand out exceptionally sharp and brilliant on the vehicle.

Engineered to Achieve Perfection™
