### POLYPROPYLENE

**Polystone® P Copolymer** - high strength with outstanding toughness at temperatures down to -30°C and high resistance to chemicals and corrosion.

**Polystone® P Homopolymer** - high strength with strong resistance to chemicals, corrosion and heat.

**Foamlite® P** - lightweight closed-pore foamed material with an excellent combination of toughness, high rigidity, strength and chemical resistance. Available as a slip-resistant version with a special three-dimensional cube-shaped grain that reduces mechanical friction between floor and shoe.

### HIGH-DENSITY PE

HDPE 300

**Polystone® G** - for a wide range of applications // **Play-Tec®** - for play areas

### HIGH MOLECULAR WEIGHT PE

HMWPE 500

**Polystone® D** - suitable for many applications including mechanical engineering and the food industry.

### ULTRA-HIGH MOLECULAR WEIGHT PE

UHMWPE 1000

**Polystone® M** - tough with good sliding properties // **Polystone® MR** - Polystone® M with a percentage of repro content // **Polystone® MR AST** - Polystone® MR with anti-static properties // **LubX® CV** - low friction sliding material

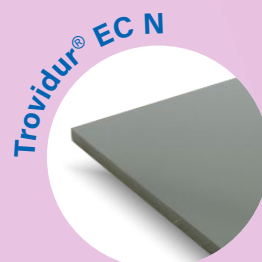

### PVCU

**Trovidur® EC Clad** - hygienic large-format wall panels with high resistance to chemicals and fire.

**Trovidur® EC N** - extruded sheets made from unplasticised hard PVC with a special surface treatment to ensure outstanding gluability.

**Trovidur® ESA D** - a high quality, glossy sheet that is specially developed for the printing industry and suitable for outdoor applications.

**Trovidur® ET** - a transparent, rigid, unplasticised PVC sheet that is especially suitable for safety equipment in machine and equipment manufacturing.
